

### Inconsistent discharge quantity

---

Inconsistent discharge quantity refers to the condition that the spray gun fails to discharge the paint at a constant rate. This defect results in film thickness variation.

**Q1:**

**Is the air volume sufficient?**

**A1:**

Ensure the required air supply capacity.

**Q2:**

**Does the source air pressure fluctuate?**

**A2:**

Inspect the source air pressure.

**Q3:**

**Is the carrying hose length between the spray gun and the feeder apparatus longer than appropriate?**

**A3:**

Adjust the carrying hose length.

**Q4:**

**Has the ejector been worn out?**

**A4:**

Inspect the ejector regularly. If it is considerably worn out, replace it.

Inspect the carrying hose regularly.

**Q5:**

**Is the carrying hose clogged?**

**A5:**

Inspect the ejector regularly. If it is considerably worn out, replace it.

Inspect the carrying hose regularly.
